

GRASS - CUT IT AND LEAVE IT

- Save time and money by leaving your grass behind as you cut it.
- This is known as "mulching" the fresh clippings on your lawn. This will naturally provide beneficial nutrients to your soil, & divert waste from the landfill.

How To Cut it and Leave it?

Remove lawn mower bag and allow clippings to fall where cut. Do not cut more than the top third (about 2-3 inches) of your lawn so the small clippings can filter down into the soil and provide a natural fertilizer.
