

Construction of upgrades and improvements to the City of Hackensack’s storm and sanitary sewers under the Anderson Street Drainage Area Combined Sewer Separation Efforts – Phase 1 Project (NJWB No. S340923-16), located in Hackensack, New Jersey, in the amount of approximately \$11M were financed by the New Jersey Water Bank (NJWB). The NJWB is a State Revolving Fund program jointly administered by the New Jersey Department of Environmental Protection (DEP) and the New Jersey Infrastructure Bank (Infrastructure Bank) and uses a combination of funds provided by the United States Environmental Protection Agency, the DEP, and the Infrastructure Bank to provide very low interest loans to borrowers for environmental infrastructure projects.

These projects will provide water quality benefits by separating the existing combined sewer system in order to reduce or eliminate infiltration and inflow and reduce or eliminate combined sewer overflows into the Hackensack River during rainfall events. Localized basement and street flooding will also be reduced or eliminated, improving water quality for residents and businesses in the City of Hackensack’s Court Street and Anderson Street Combined Sewer Service Areas.

State Revolving Fund programs around the nation provide states and communities the resources necessary to maintain and improve the infrastructure protecting our valuable water resources nationwide.
